Re: Masonite – Flush Glazing
22-0079-06 / permit 061174P

Dear Mr. Cannon:

This correspondence is in response to your letter dated May 20, 2015. The information which you provided has undergone a preliminary review by the permit program.

It has been determined that the changes described in your letter do not constitute a *modification*, as defined in subparagraph 1200-03-02-.01(1)(aa) of the Tennessee Air Pollution Control Regulations. Specifically, the use of adhesive for the flush glazing process would not result in emissions from the source exceeding the emissions allowable under the existing operating permit (#061174P). Therefore, the source will not require a new construction permit at this time.

Part 1200-03-02-.01(1)(aa)4. requires that written notification be provided to the Technical Secretary at least seven days in advance of such a change. Your letter is accepted as the required notification. You must attach a copy of your letter to permit number 061174P, as required by that part.

If you have any questions concerning this correspondence, please contact me at (615) 532-0535 or by email at John.Fuss@tn.gov.

Sincerely,

John Fuss

Subject: 22-0079-06 / 061174P
Operational Flexibility Notification
Masonite

The Division received a letter from Masonite on May 26, 2015 notifying of an operational flexibility change at source 22-0079-06. The planned change is to use an adhesive for the flush glazing process for hurricane rated doors. The letter and supplemental MSDS for the adhesive indicates that a small amount of methanol can be formed through hydrolysis and be released during the curing process.

This change is not expected to result in emissions exceeding the emissions allowable under the existing operating permit (061174P), would not result in emissions of any air contaminant (to which an emission standard applies) not previously emitted, and does not trigger any Federal requirements, it has been determined that the request meets the requirements set forth in 1200-03-02-.01(1)(aa)4. Therefore, Masonite does not require a construction permit at this time.
